

Amendments to the Claims

1-9. (Cancelled)

10. (Currently Amended) A method for enabling a plurality of users to collaborate on a project, the method comprising:

presenting a first graphical hierarchy having a plurality of nodes, the first graphical hierarchy based, at least in part, on a first organization, each node representing one or more sub-projects into which the project is divided;

in response to user selection of a node of the plurality, presenting one or more links, wherein the links are selectable to open files or execute programs for use by one or more of the plurality of users to contribute to the one or more sub-projects represented by the selected node; [[and]]

presenting a second graphical hierarchy having a plurality of nodes, the second graphical hierarchy based, at least in part, on a second organization, the second organization distinct from the first organization, the second organization also distinct from a parent/child organization of nodes;

displaying at least one representation of a task associated with a node of the plurality of nodes;

displaying at least one representation of a computer that is to be used to work on the project, wherein the computer has a work queue; and

in response to a user of the plurality moving the task representation to the computer representation, adding the represented task to the work queue of the represented computer.

11. (Original) A computer-readable medium having stored thereon computer-executable instructions for performing the method of claim 10.

12. (Cancelled)

13. (Original) The method of claim 10, further comprising:
 - displaying at least one representation of a task associated with a node of the plurality of nodes;
 - displaying at least one representation of a user of the plurality of users, wherein the represented user has a work queue; and,
 - in response to a transfer of the task representation to the user representation, adding the represented task to the work queue of the represented user.
14. (Original) The method of claim 10, wherein the graphical hierarchy is a tree, and is presented in a first pane of a user interface, and wherein the links are presented in a second pane of the user interface.
15. (Currently Amended) The method of claim [[12]] 10, wherein the graphical hierarchy is a tree, and is presented in a first pane of a user interface, the links are presented in a second pane of the user interface, and the work queue is represented in a third pane of the user interface.
- 16-28. (Cancelled)
29. (Previously Presented) The method of claim 10, wherein at least one of the nodes represents a set of software tests.

30. (New) A method for enabling a plurality of users to collaborate on a project, the method comprising:

presenting a first graphical hierarchy having a plurality of nodes, the first graphical hierarchy based, at least in part, on a first organization, each node representing one or more sub-projects into which the project is divided;

in response to user selection of a node of the plurality, presenting one or more links, wherein the links are selectable to open files or execute programs for use by one or more of the plurality of users to contribute to the one or more sub-projects represented by the selected node;

presenting a second graphical hierarchy having a plurality of nodes, the second graphical hierarchy based, at least in part, on a second organization, the second organization distinct from the first organization, the second organization also distinct from a parent/child organization of nodes;

displaying at least one representation of a task associated with a node of the plurality of nodes;

displaying at least one representation of a user of the plurality of users, wherein the represented user has a work queue; and

in response to a transfer of the task representation to the user representation, adding the represented task to the work queue of the represented user.

31. (New) A computer-readable medium having stored thereon computer-executable instructions for performing the method of claim 30.

32. (New) The method of claim 30, further comprising:

displaying at least one representation of a task associated with a node of the plurality of nodes;

displaying at least one representation of a computer that is to be used to work on the project, wherein the computer has a work queue; and

in response to a user of the plurality moving the task representation to the computer representation, adding the represented task to the work queue of the represented computer.

In re Application of: Allor et al.
Application No.: 09/739,856

33. (New) The method of claim 30, wherein the graphical hierarchy is a tree, and is presented in a first pane of a user interface, and wherein the links are presented in a second pane of the user interface.
34. (New) The method of claim 30, wherein the graphical hierarchy is a tree, and is presented in a first pane of a user interface, the links are presented in a second pane of the user interface, and the work queue is represented in a third pane of the user interface.
35. (New) The method of claim 30, wherein at least one of the nodes represents a set of software tests.
